How one workout moves through

PERSON

1. Client logs

“Bench 135, last set only 8, shoulder pinched”

AI

2. Workout Logger

Pulls out sets and a pain flag. Saves nothing.

PERSON

3. Client checks and sends

Fixes any number, rates effort, taps Send to Trainer. Only this is saved.

CODE

4. Progression Engine

Easy: reps rise to 12, then weight. Hard, missed, or pain: held.

AI

5. Progression Planner

Checks injury notes. Can flag, can’t change a weight.

PERSON

6. Trainer approves

Reads the client’s own words, edits or approves. Only then does the client see it.
