Agent workflow: one weekly loop, three human checkpoints

Every workout goes around the loop once. The AI reads and drafts. Code sets the numbers. People decide.

CHECK-IN LOOP

Runs whenever the trainer opens the dashboard

Guardrails

- AI output is checked: known exercises, reps ≤ 200, weight ≤ 2,000 lbs. One retry.
- Client words are passed in as data, so they can't give the model orders.
- If a model fails, the client's text stays saved, a saved log is never lost, and check-ins fall back to a plain draft.

Person · AI agent (reads and drafts only) · Code (sets the numbers) · Human checkpoint
